Imprinting Processes: Full Color, Multicolor, Thermography, Flat Printing, Perma Raised®, Foil Stamping, Blind Embossing, Foil Embossing and Engraving.

Flat Printing: Lithography (flat printing) is a printing process in which the image area is neither raised nor depressed. Ink adheres to the image area and is repelled by the non-image area. Offset printing presses most often are used to transfer the image from a plate to a rubber blanket. The image is then printed from the blanket on the printing press to the paper.

Thermography: Sometimes known as raised printing, thermography is a process by which a special powder is applied to the ink after the ink has been applied to the paper. The paper is then run through a heat source which causes the ink to "raise". All orders will be processed in thermography unless another process is specified or if product is listed otherwise.

Perma Raised® Thermography: Navitor™ prints all letterhead and envelopes in Perma Raised® Thermography unless otherwise indicated. Perma Raised® is a special heat-resistant thermography process designed to withstand the high temperatures of laser printers without melting, smearing or distorting color. All letterhead and envelope stock printed in Perma Raised® Thermography are guaranteed to run on laser printers, inkjet printers and copiers.

Standard and Special Inks: Standard inks are ink colors that are most commonly requested. Special inks are any specific ink numbers requested from an established source system such as PANTONE MATCHING SYSTEM®, Pantone Inc.'s check-standard trademark for color reproduction and color reproduction materials. Use the standard and special ink category on the price grids for the paper you've selected when ordering these ink colors. Samples of standard inks can be found in the front of this book. Standard Ink Colors: Black, Brown, Burgundy, Dark Blue, Green, Gray, Light Blue, Red and Teal.

 **Multicolor Inks:** The multicolor ink option offers you the flexibility to highlight your business cards and stationery with an unlimited number of thermographed inks at an affordable cost with no additional charge for registration. You may choose from over 400 ink color options for a completely customized look. Your complete ink selection list is shown in the front of this book. Multicolor Inks are available on all Letterhead and Envelope stocks.

Business Card Stocks available with Multicolor Inks:

White Vellum 80 lb.	White Laid 80 lb.	Strathmore Writing Ultimate White Wove 110 lb.
Bright White Linen 80 lb.	Ivory Laid 80 lb.	Classic Crest® Solar White 110 lb.
Warm White Linen 80 lb.	Gray Laid 80 lb.	Environment® Ultra Bright White 80 lb.
Gray Linen 80 lb.		

Multicolor inks are designated with this logo: 

Foil Stamping: Foil stamping, also known as hot stamping, is a process involving heat and pressure along with metallic foil material to stamp a design or text onto the front of the paper. The look of the finished product is similar to an ink, but is generally very shiny in appearance. This process is also done using a metallic die and is one dimensional (flat). Use the foil stamping category on the price grids for the paper you've selected when ordering. These process categories include recycled dies; dies are not returned. If foil stamping is in registration between any other printing process, please request a quote. Standard Foil Colors: Black, Burgundy, Copper, Dark Blue, Green, Gold, Light Blue, Red and Silver. Rainbow and Special Foils are available at \$45.00 per item.

Four Color Process (Full Color): The four basic process colors – cyan, magenta, yellow and black, combine to print full color products. Just as we combined yellow and blue to make green when we were all still "in crayons" four color process printing combines these four basic colors to create multiple colors and a lasting impression. See the Full Color section for extra charges relating to this process.
