

# Scent Check™ PRO

## Daily Employee Screening Tool

Employees and customers know if you're serious about their health and safety

Employers currently checking for fevers and other symptoms are now adding smell tests to vastly improve their safety measures. 78% of people reporting loss of smell had the COVID-19 antibodies. Daily testing for loss of smell, a leading indicator, can make a big difference in helping to keep communities safely open.

### Smell tests add more reliability to screening

Businesses have already changed their practices to keep customers and employees safe - enhanced cleaning, handwashing, sanitizers and more. Workplaces have also implemented symptom screening and temperature checks.

- ✓ Fever checks on their own can be flawed
- ✓ Scent Check™ fits into and enhances your current screening procedures
- ✓ Includes an administrator's handbook for implementation

### Scent Check™ Pro Offers:

 <b>Immediate Answers</b> Users mark their answers and receive instant results on their smell test	 <b>Employer Alerts</b> HR and Safety teams are sent instant alerts for missed tests and daily reporting
 <b>Staffed or Not</b> Smell tests can be supervised or self-administered	 <b>Location Options</b> Tests are done at home or on location

 **SCENT CHECK™**  
**PRO**

A simple little check could make a big difference.

A sudden loss or change in the ability to smell may be the result of any number of issues including environment, age, injuries, infections, viruses such as the one that causes COVID-19, or blockages of the nasal passage. Individuals are encouraged to consult a healthcare professional if they identify changes in their sense of smell or encountered any other symptoms of concern.

# Screening Tools Made Easy

Multiple product options for families, businesses, schools, churches and communities.
